

## **2 Concepts by the artist Frederik De Wilde for Hangar K**

1. NEO (near earth object) : start-up project HangarK. Frederik De Wilde questions the impact of an artist in Hangar K as a starting point to realize NEO and in this way promotes community formation. The project was also opened up internationally in the World Bank exhibition in Washington DC with the title 'The Art of Resilience'. The crossover artwork builds a bridge between art, data analysis and predictions. In 2020 he will show the work in Singapore in an exhibition organised by the World Bank.
2. With the company Moonmonster within the co-creation hub Hangar K, he is going to develop a VR/GAME of which he had already submitted the film script as a subsidy file to the film lab VAF with a positive evaluation but due to a lack of subsidy budget was postponed to a subsequent submission. The artist has seen this as an opportunity to question the project again and to choose another medium VR/GAME.
